

The recommendations regarding the Constitution and Terms of reference of Study Group

Title:

Semantic model for audit data services

Scope:

The study group will do the following works related with semantic model:

1. Identify the users of audit data
2. Identify the requirements of users
3. Discuss the general principles, such as complicated modeling or simple modeling, consistent and extensible, user-friendly and cost-effective
4. Decide the appropriate framework and method
5. Form the proposal of a new work project (TBD)

Model developing and maintenance are not included, but the requirements how to develop and maintain will be discussed and defined.

Membership:

5 experts at most for each P-member, experts from O-member and liaison are always welcome.

Convenor candidate:

Mr. Nobuyuki Sambuichi (JISC)
